Hello Dennis,

I just wanted to touch base with you regarding the Kapalama Military Base. On Friday, 6/19, Patrick Wilson (EPA R9 senior toxicologist) and I spoke with your toxicologist regarding path forward for the site. We presented two options: 1) additional excavation, or 2) development of a site-specific risk evaluation demonstrating that PCBs that remain at the site do not pose a risk to human health or the environment. It sounded like she was going to touch base with you regarding whether or not the risk evaluation would be the path forward for this site (versus supplemental excavation). I let her know that if the risk evaluation was selected, she could work with Patrick directly, as needed. Please provide me with a status update on the alternative selected when you get a chance.

Also, per one of our previous discussions, can you please provide me with the database of other PCB (>500 ppm) and PCB-contaminated (50-499 ppm) transformers located at the Kapalama Military Base?

Thanks
Cynthia
